

THE IMPORTANCE OF NATIVE PLANTS

Native plants are very important to our local ecosystem. They allow for vast biodiversity and are rarely invasive. Native plants tend to be more low maintenance, and are much more likely to grow strong and healthy. They require little to no fertilizer, help control erosion, and provide shelter for native insects and other species.

NATIVE FLOWERS

Purple Skullcap, Lantana, Indian Paintbrush, Dianthus, Bluebonnets, Coralbean, Purple Coneflower
